## SUMMARY

Mechanical Engineering graduate with hands-on experience in SolidWorks and AutoCAD for 3D modeling, assembly design, and engineering drawings. Skilled in mechanical component design, CAD drafting, and design for manufacturability through academic and project-based work. Strong interest in product design and mechanical design engineering within manufacturing and R&D environments.

## EDUCATION

|                                                                                                                              |             |
|------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>B.E. Mechanical Engineering, EGS Pillay Engineering College, Nagapattinam</b><br><i>CGPA: 8.5/10 (up to 7th semester)</i> | 2022 - 2026 |
| <b>HSC - Manba-ul-ula Hr. Sec. School, Koothanallur</b><br><i>Percentage: 69.6%</i>                                          | 2020 - 2022 |
| <b>SSLC - Mother India Hr. Sec. School, Valachery</b><br><i>Percentage: 71.2%</i>                                            | 2019 - 2020 |

## SKILLS

**Tools:** SolidWorks, AutoCAD

**Core Skills:** 3D Modeling, Assembly Design, 2D Drafting, Engineering Drawings

**Design Knowledge:** Design for Manufacturability, Tolerance Awareness, Sheet Metal Basics

**Manufacturing Knowledge:** Manufacturing Processes, Material Basics, Rapid Manufacturing

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                        |                       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Product Design Intern</b><br><i>Disenosys</i>                                                                                                                                                                                                                                                                                                                                                       | June 2025 - July 2025 |
| <ul style="list-style-type: none"><li>– Learned automotive and product surface modeling basics using CATIA V5</li><li>– Practiced creating and modifying 3D CAD models for design understanding</li><li>– Gained exposure to how complex product and automotive design models are developed</li><li>– Worked with CAD file formats such as STL and IGES for model editing and redesign tasks</li></ul> |                       |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Design and Fabrication of XY Plotter</b>                                                                                                                                                                                                                                                                                                                                                                                                                                      | Jan 2026 - May 2026 |
| <ul style="list-style-type: none"><li>– Designed and developed a functional XY plotter using SolidWorks and Arduino</li><li>– Created 3D models and assembly for motion and structural components</li><li>– Improved plotting accuracy by 15% through iterative design modifications and testing</li><li>– Considered manufacturability and assembly during component design</li></ul>                                                                                           |                     |
| <b>Development of Titanium–Tantalum Alloy Dental Implants</b>                                                                                                                                                                                                                                                                                                                                                                                                                    | Jan 2025 - May 2025 |
| <ul style="list-style-type: none"><li>– Worked on the development and study of Titanium–Tantalum alloy for dental implant applications</li><li>– Analyzed material properties such as strength, corrosion resistance, and compatibility with human bone</li><li>– Studied manufacturing and testing methods used in advanced biomedical implant development</li><li>– Gained understanding of implant design, material selection, and performance improvement concepts</li></ul> |                     |

## CERTIFICATIONS

- Rapid Manufacturing – NPTEL (2025)
- Product Design & Manufacturing – NPTEL (2025)
- Creo – TrioneCadd (2024)

## AWARDS

- Top Performer Award – Tamizhan Skills 3D Design & Modelling Internship (2025)
- Technical Presentation Mastery Award – EGS Pillay Engineering College (2024–25)
